**Angle bisectors of a triangle in $I_2$**

*Mathematical communications* 13 (2008), 1, 97-105.

**Abstract.** The concept of an angle bisector of the triangle will be introduced in an isotropic plane. Some statements about relationships between the introduced concepts and some other previously studied geometric concepts about triangles will be investigated in an isotropic plane. A number of these statements seems to be new, and some of them are known in Euclidean geometry.
